

## **No Inherency: OpticFit is solving for a lot of the harms in the status quo**

IndiaPRWire on April 8, 2010 "Los Angeles Fiber Optics Provider Focuses on Networks" (<http://www.indiaprwire.com/pressrelease/computer-hardware/2010040847606.htm>)

OpticFit, a Los Angeles based leading provider of technology solutions, has announced that it will focus its solutions on network applications. Several new transceiver modules and fiber optic cables have been developed to provide high-speed network system to businesses. □□ Peter Dulay, CEO of Opticfit, said: "Based on the success of our clients' networks last year, we are planning to prepare new solutions for their networks for new challenges, such as converged and triple-play services this year. With our newly developed transceiver modules, we will meet all technical and cost requirements of our current and future clients." □□ Several businesses in the West Coast have announced their investments in converting their copper cable networks into fiber optic cable networks for faster and more reliable data transfer. OpticFit has established its reputation to provide quality technology solutions while being flexible enough to meet customer-specific requirements. □□ "OpticFit has a team of dedicated account managers who help our customers choose the right technology products and services to meet their unique needs. Together with our expertise and advance technology engineers, we design customized solutions and assist customers with the implementation and long-term management of these solutions." □□ OpticFit can offer comprehensive WDM solutions and enable businesses' networks to improve their growing and merging data, voice and video market.
